MAT2500-01/04 19S Quiz 3 Print Name (Last, First) $\qquad$
Show all work, including mental steps, in a clearly organized way that speaks for itself. Use proper mathematical notation, identifying expressions by their proper symbols (introducing them if necessary), and use EQUAL SIGNS and arrows when appropriate. Always SIMPLIFY expressions. BOX final short answers. LABEL parts of problem. Keep answers EXACT (but give decimal approximations for interpretation). Indicate where technology is used and what type (Maple, GC).

Given the vector-valued function $\overrightarrow{\boldsymbol{r}}(t)=\left\langle\mathrm{e}^{2 t}, \mathrm{e}^{-2 t}, t \mathrm{e}^{2 t}\right\rangle:-\frac{1}{2} \leq t \leq \frac{1}{2} \quad$ (no credit for unidentified expressions in your responses):
a) Evaluate $\overrightarrow{\boldsymbol{r}}^{\prime}(t), \overrightarrow{\boldsymbol{r}}^{\prime \prime}(t),\left|\overrightarrow{\boldsymbol{r}}^{\prime}(t)\right|, \overrightarrow{\boldsymbol{T}}(t)$ and remember to simplify your results.
b) Evaluate $\overrightarrow{\boldsymbol{r}}(0), \overrightarrow{\boldsymbol{r}}{ }^{\prime}(0), \overrightarrow{\boldsymbol{r}}{ }^{\prime \prime}(0), \overrightarrow{\boldsymbol{T}}(0)$ and remember to simplify your results.
c) Evaluate the exact angle $\theta$ in radians between $\overrightarrow{\boldsymbol{r}}^{\prime}(0)$ and $\overrightarrow{\boldsymbol{r}}$ " $(0)$ and a single decimal place approximation in degrees.
d) Evaluate the vector $\overrightarrow{\boldsymbol{w}}$ which is the vector projection of $\overrightarrow{\boldsymbol{r}}{ }^{\prime \prime}(0)$ orthogonal (perpendicular!) to $\overrightarrow{\boldsymbol{r}}$ ' 0 ).

## solution

Note: in general for this problem to do dot products of vectors as functions of $t$, you have to load the Student Vector Calculus package either with the Tools Menu, or in line (otherwise the dot product will introduce complex conjugate overbar notation that won't simplify as a general function of $t$, but we don't need general values of $t$ here so ignore this):
[> with(Student[VectorCalculus]): \# not necessary for this quiz
$\gg r(t):=\left\langle\mathrm{e}^{2 t}, \mathrm{e}^{-2 t}, t \mathrm{e}^{2 t}\right\rangle$ :
$\left[>r(t) ; r^{\prime}(t) ; r^{\prime \prime}(t) ; r^{\prime}(t) \cdot r^{\prime \prime}(t) ; \operatorname{expand}(\%) ;\right.$ simplify $(\%)$
